

 **Your website is live!** Just follow these 3 steps to turn on the buy buttons and contact form.

- 1 SHOPIFY
- 2 RESEND
- 3 NETLIFY

1 Shopify – Turn On the Buy Buttons

So people can actually buy the Warport and Hoodie on your site

What is this? Shopify is where your products and orders live. Right now your website can see it, but we need to give it a special "key" so it can show prices and take payments.

1 Log in to Shopify

Go to `your-store.myshopify.com/admin` and sign in like normal.

2 Create a new app

Click **Settings** (bottom left) → **Apps and sales channels** → **Develop apps** → **Create an app**. Call it "*PTEB Website*".

3 Turn on 2 permissions

Click **Configure Storefront API scopes**. Tick these two boxes:

`unauthenticated_read_product_listings`

`unauthenticated_write_checkouts`

Then click **Save**.

4 Copy your token

Click **Install app**, then go to **API credentials**. Copy the **Storefront API access token**. It's a long string of letters and numbers. Save it somewhere (notes app is fine).

YOU WILL NEED THESE 4 VALUES FOR STEP 3

SHOPIFY_STORE_DOMAIN	Your Shopify URL, e.g. <code>ptebtuning.myshopify.com</code>
SHOPIFY_STOREFRONT_ACCESS_TOKEN	The long token you just copied above
SHOPIFY_WARPORT_HANDLE	Default: <code>pteb-warport</code>
SHOPIFY_HOODIE_HANDLE	Default: <code>tuned-by-pteb-hoodie</code>

 **Check the product handles match exactly.** In Shopify go to Products, click a product, scroll down to "Search engine listing" and look at the URL at the very end. That last part is the handle. It must match exactly what's in the table above.

2 Resend – Turn On Contact Form Emails

So enquiries from the website actually arrive in your inbox

What is this? Resend is the service that sends emails on behalf of your website. Without it, when someone fills out your contact form, the message goes nowhere. It's free.

1 Make a free account

Go to `resend.com` and sign up. No credit card needed.

2 Get your API key

YOU WILL NEED THESE 3 VALUES FOR STEP 3

RESEND_API_KEY	There_key from step 2
RESEND_FROM_EMAIL	<code>noreply@ptebtuning.com</code>

Go to **API Keys** → **Create API key**. Copy the key that starts with `re_`.

ADMIN_EMAIL

Already set to **prestigeteamhelp@gmail.com**

3 Add your domain

Go to **Domains** → **Add domain**. Type in `ptebtuning.com`. Resend will show you some DNS records.

Free plan includes 3,000 emails/month. That's way more than enough for enquiries. No card required.

4 Paste the DNS records

Log in to wherever you bought your domain name. Add the DNS records Resend gave you. Wait about 5 minutes for it to verify.

Netlify – Paste Everything In and Redeploy

This is where your website actually lives. You're just giving it the keys from Steps 1 and 2.

What is this? Netlify hosts your website. You need to give it the tokens and keys from the previous two steps. Think of it like giving your website the passwords it needs to talk to Shopify and Resend.

Do this once. Takes 5 minutes.

- A** Go to **app.netlify.com** and log in. Click your site (*ptebtuning*).
- B** Go to **Site configuration** → **Environment variables** → **Add a variable**.
- C** Add each of the 7 variables from Steps 1 and 2. The name goes on the left, the value goes on the right. Do one at a time.
- D** Go to **Deploys** → **Trigger deploy** → **Deploy site**. Wait 2 minutes. **You're done**.
